SUMMARY

Industrial Engineer focused on process automation and data-driven problem solving. Delivered an ML-based demand forecasting and safety-stock solution for a live manufacturing MRP system and automated procurement workflows to achieve an 83% reduction in processing time.

Looking for an Analyst role to design and implement digital solutions that optimize supply chain and business operations.

Core strengths: ERP Development, Process Optimization, SQL, Supply Chain, Requirements Analysis, Process Automation

CORE SKILLS

Enterprise Systems: ERP Development, MRP Systems, Inventory Management, Safety Stock Optimization, Supply Chain Optimization

Industrial Engineering: GAMS (Mathematical Modeling), Arena Simulation, Operations Research, Process Optimization

Programming & Data: Python, SQL (PostgreSQL, MSSQL, MySQL), C#, VBA

AI / ML: Demand Forecasting, Facebook Prophet, LightGBM, Quantile Regression, Predictive Analytics

WORK EXPERIENCE

Project Engineer (Student) | Serdar Plastik

Oct 2025 – Jun 2026

- Built a safety-stock and demand-forecasting module using Prophet and LightGBM, and integrated it into the plant's MRP system so reorder points update from the model instead of a fixed manual formula. ([GitHub Repository](#) / [Live Demo](#))
- Implemented quantile regression to determine safety stock levels by capturing the full distribution of consumption, ensuring inventory buffers account for variability

Purchasing Intern | Bozankaya

Aug – Sept 2025

- Developed a Python-based automation solution (Pandas, Openpyxl) for manual Excel processes, achieving an 83% improvement in time efficiency. Transformed repetitive data entry and reporting processes into streamlined automated pipelines

ERP Intern | ULAK Haberleşme

Jul – Aug 2025

- Developed a Python-based asset and inventory tracking system to replace the spreadsheets the team had been using to track equipment. ([GitHub Repository](#))

Software Intern | ESEN Sistem Entegrasyon

Jul – Aug 2024

- Built a Python tool using Matplotlib and Tkinter to visualize operational data for the team.

Quality Control Intern | EMGE

Jan – Feb 2024

- Ran precision measurements and quality inspections on CMM machines using PC-DMIS, checking parts against spec.

PROJECTS & ENTREPRENEURSHIP

Co-Founder & Business Analyst | Teklif's (E-commerce startup — competitive-bidding retail platform)

- Researched the market and defined the functional requirements for Teklif's, an e-commerce platform built around competitive bidding instead of fixed pricing.
- Worked through the platform's KVKK (data privacy) obligations and mapped out risk scenarios before development started.

Project Management | RAPID UAV Project — Neostellar

- Handled market research and stakeholder coordination for RAPID, a disaster-response UAV with AI-based image processing, and helped shape the early product roadmap.

EDUCATION

B.S. in Industrial Engineering (%100 English) | Çankaya University | 2021 – 2026

CERTIFICATIONS

- Advanced Python Programming — BTK Academy (2025)
- DIA ERP & Business Processes Training — Çankaya University (2025)
- AI For Everyone — Coursera / DeepLearning.AI (2025)
- Python Essentials 2 — Cisco Networking Academy (2025)
- ISO 9001:2015 Quality Management Systems Fundamentals — Acadezone (2025)
- McKinsey Forward Program — McKinsey & Company (2025)
- Ethical Hacker — Cisco Networking Academy (2025)
- Introduction to Cybersecurity — Cisco (2025)
- Machine Learning Summer School — Science Academy / METU (2024)
- CCNA v7: Bridging Certificate — Cisco (2022)

LANGUAGES

Turkish (Native) • English (Fluent)
